VISION

We believe that applying code standardization, enforcing security and quality should be a common practice among all Salesforce dev teams.

MISSION

CodeScan empowers Salesforce dev teams in all levels with coding tools that help them develop faster, better, cleaner, and more efficiently.

LARGEST Salesforce Ruleset

150+ Customers

21B+ Lines Checked

CodeScan is the leading **end-to-end** static code analysis solution, Lightning-ready and exclusively for Salesforce languages, enabling dev teams everywhere.

*Available on cloud, on premises, and as a editor plugin.

Control Quality

CodeScan maintains the quality of your code throughout development while allowing you to customize your own metrics of your quality gates.

Boost Security

CodeScan makes sure your code is secure with a selection of security rules based on CWE and OWASP standards.

Track Technical Debt

CodeScan provides the ability to track the amount of technical debt in your projects in order to plan your refactoring efforts.

Increase Productivity

CodeScan helps automate your reviews, have better and cleaner code in production, so you can focus on things that matter instead.

Save Time on Code Reviews

CodeScan reduces 50% of time spent on code review time with static code analysis allowing you to focus purely on semantics as opposed to syntax.

Enforce Standards

CodeScan allows you to apply coding rules and standards, standardize the way your organiz ation looks at code, streamline peer review processes.
